

SpacePole Stack™

Payment Solutions

SpacePole Stack is a simple low-cost mounting solution for payment terminals from ALL manufacturers. It protects your investment in payment terminal hardware by preventing accidental drops and cable damage, reducing hardware failures that lead to downtime and service costs. Stack is compatible with ClickSafe® security tethers, meeting PCI Best Practice by providing protection from theft and tampering. Using SpacePole Stack to present and protect your payment terminal hardware ultimately delivers a superior customer experience at the point of payment.

Compatibility

Compatible with all SpacePole MultiGrip plates which means that it is easy to upgrade. When the payment terminal changes you leave the pole in place and simply replace the MultiGrip plate, maximising your investment in Stack. Also available with the unique MultiClip® interface specific to the Ingenico Lane series of terminals.

Benefits

- **A low-cost solution** with a high specification and a 2-year warranty, a compelling return on investment proposition for cost-sensitive merchants.
- **Constructed in a tough ABS/ glass fibre composite plastic**, ideal for deployment within retail, hospitality, leisure, entertainment, and transportation payment applications.
- **Optimised for any countertop height**, with two height options out of the box.
- **Vulnerable cables are protected and kept neat and tidy**, as the wider body provides improved cable management and protection.
- **Choice of mounting options**, with self-tapping screws, and a 3M VHB self-adhesive pad for counters where drilling holes is impractical.
- **Compatible with Kensington ClickSafe®** security tethers for added security and adherence to PCI Best Practice compliance.
