

# PRIVACY

## PRIVACY FILTERS ADHESIVE, MATTE

A Gearlab® Adhesive Privacy Filter is for bezel-free glass displays. You get a crisp and clear rendering of your display on tablets and laptops, while people on either side only see a matte black shield. At the same time, you protect the sensitive screen surface from scratches and damage.

Protect your company data and GDPR compliance – both on the move and in the office – by keeping your login credentials, sensitive personal and confidential data unexposed to unwanted onlookers.

Gearlab® Adhesive Privacy Filters for frameless displays.
