PRIVACY FILTERS

MAGNETIC, MATTE OR GOLD

A Gearlab® Magnetic Privacy Filter is for Macbook and laptops without built-in metal bezels. You get a crisp and clear rendering of the display, while people on either side only see a black or golden shield. At the same time, you protect the sensitive screen surface from scratches and damage.

Protect your company data and GDPR compliance – both on the move and in the office – by keeping your login credentials, sensitive personal and confidential data unexposed to unwanted onlookers.

Gearlab® Magnetic Gold Privacy Filters
for Macbook and laptops without bezels.
