About

The Downtown Vein & Vascular Center, located in Downtown Brooklyn, is your first and only stop when you need personalized medical care for your arteries, veins and more. In the fast-paced world of New York City, don't let circulation problems slow you down. At this state-of-the-art facility that serves all Brooklyn and beyond, you have access to compassionate, professional care for your:

- Vein or artery diseases, including a wide range of vascular conditions
- Peripheral artery disease (PAD), along with its painful symptoms
- Uterine fibroids and the many conditions they cause
- Erectile dysfunction
- Hemorrhoids
- Fallopian tube blockage
- Enlarged prostate

The practice was founded by Dr. Sergei Sobolevsky, a recognized endovascular medicine specialist and a leader in the growing field of endovascular surgery, as well as vascular and interventional radiology. He and his team rely on the latest techniques, using up-to-date medical imaging technology to deliver advanced, minimally invasive treatment options. Contact them today!

Our Specialties

- Vein / Artery Diseases
- Uterine Fibroids
- Peripheral Artery Diseases

What Vein Treatments Are Available?

The best vein specialist may use different vein treatments based on your diagnosis. Your doctor has expertise in use of a wide range of procedures to treat vein or artery disease, including:

- Endovenous laser ablation. This minimally invasive procedure treats damaged veins through heat generated by laser technology. The heat damages the vein walls to eliminate the defective veins.
- Endovenous radiofrequency ablation. An advanced minimally invasive technique, RFA treats venous insufficiency through use of radiofrequency waves to cauterize and close the malfunctioning varicose veins.
- Endovascular therapy. This minimally invasive procedure is done inside affected blood vessels to unblock an obstruction or remove a clot. A top vein doctor uses a variety of transcatheter techniques, including a balloon angioplasty or permanent mesh stenting.
- Sclerotherapy for spider veins and varicose veins. Sclerotherapy is a procedure for treating defective or dysfunctional A vein specialist injects a solution directly into an affected vein, which causes the vein to scar, close and die. The blood that flowed through the vein reroutes through nearby healthy veins.
- Ambulatory phlebectomy. This is a surgical procedure to remove damaged superficial veins, such as varicose veins, through tiny incisions made in the skin.
- Thrombectomy. This surgical procedure is used to remove a blood clot inside an affected artery or vein.
- Vascular and arterial embolization. Embolization involves cutting off the blood flow to a specific blood vessel. A doctor injects embolic agents into the affected artery or vein to prevent further blood flow.
