DENTISTS

DR. ANDREY ILYABAYEV

His ability to do finely detailed work with his hands came naturally to him and proved to be a valuable skill set for a dentist.

DR. GREG GELFAND

He is a tech fan and the latest technology in dentistry, like lasers and other state-of-the-art instruments, appeal to him because he loves to discover ways to make procedures easier on patients.

DR. MARIANNA KNOP

She has considerable skill as an artist and craftsperson, where this added talent is perfectly suited to making precise dental appliances.

DR. ROMAN KOGEN

His enthusiasm and professional work ethic allows Dr. Kogen to leave lasting impressions on his patients while achieving quality work and providing a giving power that dentistry is able to exalt.

POPULAR PROCEDURES

Laser Teeth Whitening

Our in-office [laser teeth whitening](#) system allows patients to achieve dramatic whitening results with a minimal investment of time. You can expect to leave our office with significantly whiter teeth after a single appointment that lasts about an hour. The procedure is completely painless and can eliminate or substantially lighten even the most persistent stains and discoloration.

Porcelain Veneers

The procedure involved in placing [porcelain veneers](#) is relatively quick and virtually painless. A small amount of enamel is removed from the surfaces of the teeth in order to accommodate the veneers, which are crafted according to precise specifications. Once the veneers are ready to be placed, the dentist bonds them to each tooth's surface using a strong dental adhesive that hardens with exposure to a beam of light. Veneers fit comfortably and unobtrusively in your mouth, and you can show off your new smile right away.

Dental Bridges

Aside from the obvious aesthetic benefits, there are numerous practical advantages to replacing missing teeth with [dental bridges](#). By filling the gap between natural teeth, dental bridges can help prevent these teeth from drifting out of alignment. In addition, because they are fixed into place, they cannot slip or be removed by hand. As a result, they offer a stable, long-term solution to problems that might otherwise develop with chewing and speaking.
